

NatéoSanté, a French company specialising in air quality treatment, has launched EOLIS, the first intelligent air filtration system especially conceived for the Indian market. Manufactured in France, EOLIS is intended to be made in India later this year, at EOLANE industrial plant in Bengaluru.

EOLIS air manager has been conceived from the initial idea to provide an air filtration system combining high performances and simplicity of use. Tailored for professionals in home appliances, hospitality and health/medical sectors, EOLIS will incorporate a filter system composed of a medical grade filter HEPA H13 or ULPA U15 and a high density active carbon filter able to treat an area of either 60 or 120 m² (two versions are proposed). NateoSanté air filtration systems are equipped with the most efficient filters on the market. In order to ensure 99.9% purification, these units are silent, reliable, easy to use, adapted to the customer needs and energy efficient.

The Indian market is extremely promising feels Stéphane Monnier, international business development manager, "India is a strategic market for our company and we want to provide Indian professionals with the best equipment to treat air pollution. Some of the cities in India like New Delhi are facing huge challenges due to very heavy levels of concentration of fine and ultrafine particles in the air, and NateoSanté wants to work with Indian professionals with products like EOLIS that have a proven track record for improving quality of air and quality of life."

EOLIS is more an air manager than an air purifier. Thanks to the ACTIV mode, EOLIS is a smart unit

1 & 2. The air manager is available in two sizes to suit different space sizes.

that automatically adapts to the environment. It includes a monitoring system that is easy to use with three user control interfaces: touch screen panel, computer or smartphone. Its working, maintenance and filter replacement cycles can be easily monitored as each product is unique and gets a specific ID number.

EOLIS air manager is available in India and distributed through the Indian partners of NatéoSanté. Available in two versions, depending on the area surface to be treated, it is the first intelligent air filtration system to be marked with CE certifications.
